SceneDock – User Guide

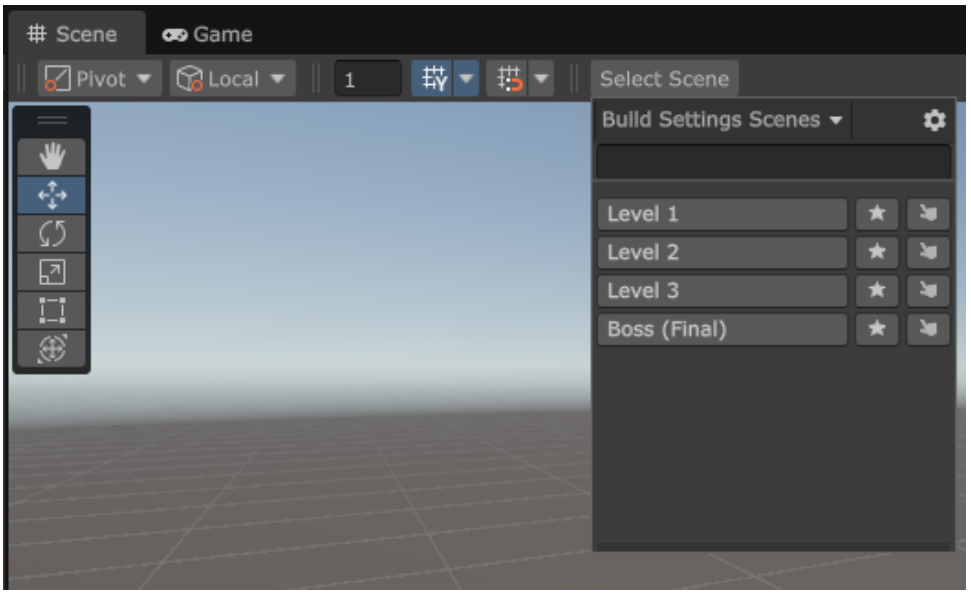

Version: 1.0.0 Minimum Unity Version: 2021.3 LTS

1. Installation

Install and Import the asset from the package manager.

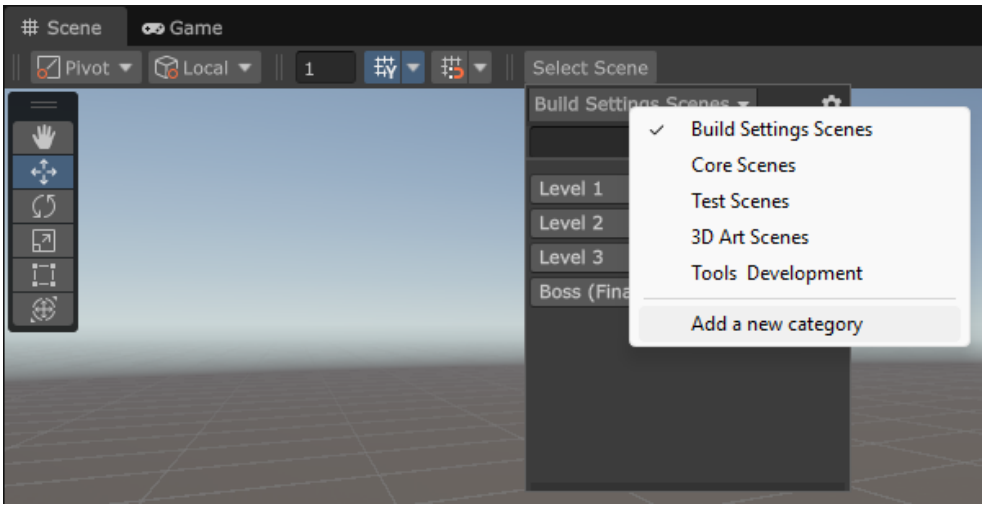

2. Usage

2.1) Opening the window

- Open **SceneDock** from the Scene View toolbar by clicking the "**Scene Select**" button.
- By default, SceneDock displays and lets you navigate scenes listed in your **Build Settings**.

2.2) Categories

- To create a new category:
    1. Click on the current category name (e.g., "Build Settings Scenes").
    2. Select "**Add New Category**".
    3. Enter a name and confirm.
- To switch between categories:
    - Click the category title to open the category list, then select the desired one.

2.3) Managing Scenes

- To add the currently open scene to the active category:
    - Click the "**Add Scene**" button.
- To locate a scene in the Project window:
    - Click the **pointing finger** icon next to the scene name.
- To mark a scene as a favorite:
    - Click the **star icon** next to the scene name.

See **CHANGELOG.txt** for version history.
